

Partnership Overview

Megaport has partnered with NTT Singapore to enable customers in NTT Serangoon Data Centre to establish direct, secure and private connections to multiple cloud service providers, including Alibaba Cloud, Amazon Web Service (AWS), Google Cloud Platform, Microsoft Azure, and Oracle Cloud via a single port that supports multiple virtual private connections. Through the new “NexConnect Cloud Service”, enterprise customers inside NTT Singapore Serangoon Data Centre can now rapidly and flexibly connect to their choice of cloud without the need for local connectivity, thus simplifying the building of highly scalable hybrid and multi-cloud models.

Key Service Features

- One-Stop Multi-Cloud**
 Access multiple cloud service providers through a single port
- Secure & Direct**
 Secure private cloud connection, bypassing the public Internet
- High Performance**
 Dedicated private line where data access is fast, low latency, scalable and reliable
- Agile & Flexible**
 Fast and highly available direct cloud access with redundant and diverse connectivity options
- Software Defined Network**
 Multi-Cloud interconnectivity powered by Megaport, leading SDN-enabled elastic interconnection services
- Bandwidth On-Demand**
 Choose any speed and scale in tandem with your specific requirements
- World-Class Data Centre Service**
 Purpose-built Nexcenter in a light industrial area of North Eastern part of Singapore and ultra-low latency access to/from major cities in Asia
- Trusted Global Brands**
 Confidence from two innovative global leaders in their space

Your On-ramp To Cloud

World-Class Service From The Best ICT Hub in Asia

NTT communications have the largest-scale data centre and network coverage in the APAC region which bolsters the speed of its customers' business expansions. NTT Singapore Serangoon Data Centre is one of 140+ NTT Nexcenter Data Centres worldwide. Like every other NTT Nexcenter, Singapore Serangoon Data Centre meets globally consistent Data Centre Standards consisting of more than 300 items, including international certifications and operational guidelines such as ISO and ITIL. With industry leading SLA for power availability, redundant power supply, air conditioning, and network facilities, system uptime are maximized for all mission-critical applications.

Physically located in a light industrial area of North Eastern part of Singapore and directly connected to the Asia Submarine-cable Express (ASE) for ultra-low latency connection with major cities in Asia, Singapore Serangoon Data Centre is an ideal choice for Financial Service Industry and Japanese multinational corporations demanding seamless support for continuous growth in Asia. With Singapore leading the ASEAN region in the adoption of cloud computing, enterprises choosing NTT are now further enabled with the benefits of hybrid and multi-cloud by easily managing all its direct, highly scalable and on-demand private connections to multiple cloud service providers through the NexConnect Cloud Service.

One-Stop Multi-Cloud Connectivity Through Megaport

To stay ahead of the pack, businesses require the agility to reduce risk and increase ROI; constant communication with customers to scale up service quality and functionality; and increased efficiency through fast deployment of new and highly available services.

The Megaport Software Defined Network connects companies directly and securely to cloud, any cloud regions in the world, so they can distribute workloads to or run the necessary applications from where it needs to be at the desired time. Our global, carrier grade network is literally directly connected to the networks of our cloud partners, otherwise commonly referred to as a NNI (Network to Network Interface) connection. With 185+ locations globally, there is a wide choice of cloud service providers to choose from and this flexibility is particularly crucial for enterprises adopting a hybrid or multi-cloud strategy.

From backup to disaster recovery to storage, enterprises inside NTT Singapore Serangoon Data Centre can rapidly access their desired services, providers, and availability zones via a single private connection through NTT NexConnect Cloud Service. Each cloud connection, or virtual cross connect in the diagram, is a direct point-to-point Ethernet connection that is high speed, private, and secure. It is therefore a dedicated cloud connection that is low latency, high performing, and highly reliable. Only because data does not pass through the public internet, which is on best effort basis, can enterprises fully reap the benefits of cloud for improved efficiency and scalability.

About NTT Communications Corporation

NTT Communications provides consultancy, architecture, security and cloud services to optimize the information and communications technology (ICT) environments of enterprises. These offerings are backed by the company's worldwide infrastructure, including the leading global tier-1 IP network, the Arcstar Universal One™ VPN network reaching 196 countries/regions, and over 140 secure data centers worldwide.
