

Partnership Overview

Megaport has partnered with NTT Thailand to enable businesses in Thailand to establish direct, secure and private connections to multiple cloud service providers, including Alibaba Cloud, Amazon Web Service (AWS), Google Cloud Platform, IBM Cloud, Microsoft Azure, Oracle Cloud, and Salesforce via a single port that supports multiple virtual private connections. Through the new Software-Defined Exchange Service (SD-Exchange), enterprise customers in Thailand can now rapidly and flexibly connect to their choice of cloud from NTT Bangkok 2 Data Centre, thus simplifying the building of highly scalable hybrid and multi-cloud models.

Key Service Features

- One-Stop Multi-Cloud**
 Access multiple cloud service providers through a single port
- Secure & Direct**
 Secure private cloud connection, bypassing the public Internet
- High Performance**
 Dedicated private line where data access is fast, low latency, scalable and reliable
- Agile & Flexible**
 Fast and highly available direct cloud access with redundant and diverse connectivity options
- Software Defined Network**
 Multi-Cloud interconnectivity powered by Megaport, leading SDN-enabled elastic interconnection services
- Bandwidth On-Demand**
 Choose any speed and scale in tandem with your specific requirements
- World-Class Data Centre Service**
 Purpose-built Nexcenter meeting globally consistent Data Centre Standards
- Trusted Global Brands**
 Confidence from two innovative global leaders in their space

Your On-ramp To Cloud

State-of-the-art Data Centre For Global Business

NTT Bangkok 2 Data Centre is a high quality Nexcenter Data Centre ideal for main data centre disaster recovery and business continuity planning. Power, air conditioning, telecommunications, security and other facilities are built with redundancy to ensure operational continuity and minimize the risk of any unexpected circumstances bringing customer systems to a halt.

The Software-Defined Exchange Service (SD-Exchange) combines the strong capability of NTT Thailand's infrastructure and Megaport's global Software Defined Network (SDN) to offer businesses in Thailand secure and on-demand access to the world's leading Cloud Service Providers (CSPs). Through SD-Exchange, enterprises in this growing international business hub can reap benefits of hybrid and multicloud by easily managing all its direct, highly scalable and on-demand private cloud connections from NTT Bangkok 2 Data Centre.

One-Stop Multi-Cloud Connectivity Through Megaport

To stay ahead of the pack, businesses require the agility to reduce risk and increase ROI; constant communication with customers to scale up service quality and functionality; and increased efficiency through fast deployment of new and highly available services.

The Megaport Software Defined Network connects companies directly and securely to cloud, any cloud regions in the world, so they can distribute workloads to or run the necessary applications from where it needs to be at the desired time. Our global, carrier grade network is literally directly connected to the networks of our cloud partners, otherwise commonly referred to as a NNI (Network to Network Interface) connection. With 200+ locations globally, there is a wide choice of cloud service providers to choose from and this flexibility is particularly crucial for enterprises adopting a hybrid or multi-cloud strategy.

From backup to disaster recovery to storage, enterprises in Thailand can rapidly access their desired services, providers, and availability zones via a single private connection through SD-Exchange. Each cloud connection, or virtual cross connect in the diagram, is a direct point-to-point Ethernet connection that is high speed, private, and secure. It is therefore a dedicated cloud connection that is low latency, high performing, and highly reliable. Only because data does not pass through the public internet, which is on best effort basis, can enterprises fully reap the benefits of cloud for improved efficiency and scalability.

About NTT Communications Corporation

NTT Communications provides consultancy, architecture, security and cloud services to optimize the information and communications technology (ICT) environments of enterprises. These offerings are backed by the company's worldwide infrastructure, including the leading global tier-1 IP network, the Arcstar Universal One™ VPN network reaching 196 countries/regions, and over 140 secure data centers worldwide. NTT Communications' solutions leverage the global resources of NTT Group companies including Dimension Data, NTT DOCOMO and NTT DATA.
