

Accelerate SASE with Megaport.

Modernize the edge, enhance security, and simplify multicloud connectivity
with Megaport's global Network as a Service solutions

Power your SASE success with the industry's most advanced global Network as a Service platform.

Megaport's global Network as a Service platform offers a full suite of software-defined solutions designed to reduce obstacles to modernization, achieve SASE success, and embrace the next generation of network transformation.

Today's workforces are increasingly distributed, mobile, and remote, and the nature of networking is more complex than ever.

Securing data from the edge through the core of the network to the cloud in both hybrid and multicloud environments presents a daunting challenge. How can IT organizations modernize networking and take advantage of the latest innovations like SD-WAN while still maintaining the highest levels of control, visibility, and data security?

Enter Secure Access Service Edge, or **SASE**. SASE was coined by Gartner in 2019 and is a new framework for converging the best elements of software-defined networking like SD-WAN with modernized edge security.

The end result: a transformed network architecture that is dynamic, flexible, and secure, and can provide the performance needed for 24x7 applications and resources hosted across public, private, and hybrid clouds.

Megaport can help you take advantage of these best-in-class networking innovations by removing obstacles, reducing complexity, and speeding up deployments, enabling you to achieve SASE success with software-defined solutions tailored to the exact needs of your business.

Megaport: Simple, Fast, and Direct Connectivity for SASE.

SASE and SD-WAN solutions don't work without secure, enterprise-grade network connectivity.

Partnered with the largest SASE providers in the world, Megaport delivers a global, private Network as a Service (NaaS) platform that simplifies connectivity and enhances security. With on-ramps around the world providing rapid and secure cloud connectivity, Megaport's neutral platform enables you to utilize whichever vendors or mix of technologies works best for your organization. Plus, it's direct, with solutions that offer 100% private and direct connectivity from the edge to the cloud across the middle and last miles of the network.

SASE Technology Alliances

A Full Suite of Solutions to Empower SASE + Beyond

MVE (Megaport Virtual Edge)

MVE enables the hosting of Network Function Virtualization (NFV), such as SD-WAN capabilities, directly on Megaport's global Software Defined Network (SDN).

VXC (Virtual Cross Connect)

Connections available between any two endpoints on the Megaport Network, provisioned in under one minute.

MCR (Megaport Cloud Router)

Virtual router for on-demand, private, Layer 3 connectivity to leading service providers between key global routing zones.

Megaport
High-speed Ethernet interface (1G and 10G Ports) that connect to the Megaport Network. VXC options between Megaport Ports range from 1 Mbps to 100 Gbps.

MegaIX

Megaport-owned and operated 100% neutral Internet Exchange providing connectivity to content and services across multiple regions.

Reimagine Connectivity.

Megaport is a leading provider of Network as a Service (NaaS) solutions. The company's global Software Defined Network (SDN) helps businesses rapidly connect their network to other services via an easy-to-use portal or our open API. Megaport's network offers greater agility, reduced operating costs, and increased speed to market compared to traditional networking solutions. Megaport partners with the world's top cloud service providers, including AWS, Microsoft Azure, and Google Cloud, as well as the largest data centre operators, systems integrators and managed service providers in the world. Megaport is an ISO/IEC 27001-certified company.
